

## CONTROL PANELS

---

- The right size/material enclosure
- Optimum functionality thanks to the great variety of components
- Customised planning and implementation
- Certified to many standards

BARTEC produces local control stations for use in areas with flammable gases and dusts. Depending on the application area, the control stations are designed with the type of protection "Increased safety" or "Protection by enclosure". The explosion-protected local control stations are available in aluminium, polyester or stainless steel. When selecting the version, you can choose between a cabinet with door and an enclosure with screw cover. Control, signalling and display devices and remote I/O systems are installed according to customer specifications. The installation of industrial standard equipment in controls for Zone 21, type of protection tb "Protection by enclosure" is possible. The control elements can also be mounted on a mounting rail or in the front wall. Free installation areas can be designated for the subsequent installation of BARTEC control and signalling devices, which are then sealed using blanking plugs. All explosion-protected local control stations are supplied prewired on terminals

### Fields of application

Chemical and petrochemical industry, process and plant engineering, pharmaceutical and food industry, OFF SHORE areas.

### Explosion protection

Flameproof enclosures BARTEC B or EJB series are designed to be installed in industrial plants, where potential hazardous atmospheres occur. These areas are either classified as zone 1 and 2 or as zone 21 and 22.

These enclosures are designed to contain regular industrial electrical components or equipment on the mounting plate like fuses, transformers, circuit breakers, relays, PLC etc. and to be fully integrated in the hazardous area as control- or distribution panel.

Depending on the installed components; observe the specifications on the type label.

According to EN-IEC 60079-0,-1

The TNCD range of enclosures is designed to meet the harshest of environments and are ideal for any rugged application where a potentially explosive atmosphere may be present. Our range is comprised of many standard sizes, all manufactured in 316L/CF3M stainless steel providing long term corrosion resistance. The enclosures allow for the use of standard electrical components inside. Thus subsequent replacement and maintenance is easy and may be performed by skilled electricians. If required, several enclosures may be assembled on a framework with separate or common Ex e/i connection boxes. The enclosures are supplied empty with component certification or as assembled turn-key systems.

## Features

- Flexible product range with many standard sizes
- IP 66 ingress protection as standard
- Wide temperature ranges
- Flexible certification
- May be used with Ex e/Ex i connection box
- Optional window on lid, sides or back
- High operational reliability
- Non invasive maintenance schedule

## Typical applications

- Motor starter
- Alarm panel
- Intrinsically safe circuits
- Transformer
- Charging unit
- Terminal boxes

## Options

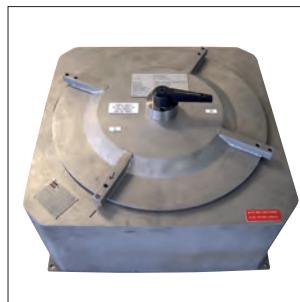

- Ex d enclosure with windows in lid
- Lamps or switches in lid or base, for Ex d enclosure, as well as Ex e enclosure

## Explosion protection

- Max. rated voltage 11kV
- External 800 A busbar system
- Medium voltage and control system separated from each other in two independent Ex d compartments
- Setting all parameters from outside without opening the door

8SN7 is the BARTEC medium voltage switchgear up to 11 kV suitable for hazardous areas like offshore, chemical industries or power plants. Each 8SN7 panel consists of a single unit which can be equipped with a withdrawable circuit breaker or contactor, earthing switch, as well as with all the accessories for conventional units. 8SN7 switchgear is designed for free outdoor standing. On request special accessories like base frame or canopy are available.

The enclosure is in three versions available:

- Carbon steel painted/gap surfaces protected with MOLYKOTE®
- Body with carbon steel painted and gap surfaces with stainless steel (316L)
- Stainless steel complete painted or unpainted

- Variety of covers
- Variety of connection possibilities
- Bushings can be fitted on all sides
- Flange surfaces for mounting enclosures
- Low weight

As flameproof control unit, this Ex d enclosure from BARTEC provides a compact solution for the installation of standard industrial products, whereby components such as contactors and relays are installed in a flameproof enclosure. The enclosure is light, flexible with respect to wiring systems, may be flange mounted and can be equipped with electrical or mechanical line bushings on the sides and in the lid. The different versions of lids enable the installation of display units or devices with control buttons. The installation of Ex i assemblies is also permitted.

#### Types of connection

Flameproof control units may be connected either with direct cable entry by means of Ex d cable glands or indirectly using an Ex e junction box. The electrical connection between Ex d and Ex e area takes place using Ex d line bushings with terminals. Control devices and display units can be installed in the junction box

BARTEC offers two type series of explosion proof encapsulated enclosures for using electric components in hazardous (potentially explosive areas). Within the scope of the EC model test certification, these can be fitted with industrial standard units, such as e.g. small-type motors, printed circuit boards and cameras. The mounted parts are evaluated by BARTEC, fitted into a suitable housing and provided as a complete device with the corresponding ATEX marking. This housing series offers optimum solution approaches for control, regulating and display devices in Zone 1 and zone 21 hazardous areas.

<p>closed e. g. for vibration measuring instrument or printed circuit board installation</p> 	<p>Ø 30 mm to max. 25 cm<sup>3</sup> volume  Ø 45 mm to max. 100 cm<sup>3</sup> volume  Ø 60 mm to max. 200 cm<sup>3</sup> volume  Ø 90 mm to max. 1000 cm<sup>3</sup> volume  Ø 120 mm to max. 2750 cm<sup>3</sup> volume  Ø 140 mm to max. 8625 cm<sup>3</sup> volume  Ø 160 mm to max. 8625 cm<sup>3</sup> volume  Ø 180 mm to max. 8625 cm<sup>3</sup> volume  Ø 200 mm to max. 8625 cm<sup>3</sup> volume</p> 	<p>with multicore tube encapsulated directly in the housing only up to a maximum 60 mm housing diameter</p> 
<p>with shaft bushing e. g. for small motors, rotary encoders or switches</p> 		<p>with cable entry</p> 
<p>with inspection glass e. g. for cameras, optoelectronic units Displays</p> 		<p>with Ex d screwed cable gland not suitable for gas subgroup IIC when sparking parts have been fitted.</p> 

- High IP-protection class
- Small design
- Simple installation

These up to 4 W potentiometers show that Ex potentiometers can be small and compact. The external dimensions are approximately the same as those of standard industrial potentiometer enclosures. Central fixing in a single hole and the standard size of shaft have been included. From the variety of resistors on the market we have chosen cemented wire-wound resistors and carbon film resistors and developed a standard-program range. The metal Ex d enclosures are tailored to the dimensions of the resistors and feature a standard 30 mm diameter. The potentiometers have been designed so that the stated nominal capacities can be fully exploited at temperature class T6 or T5 and be deployed in zones 1 and 2. The potentiometer is fitted into an enclosure that meets the requirements of an approved type of protection in conformance to IEC/EN 60079-0.

This standard range of up to 8 W potentiometers with wire-wound resistors show that Ex potentiometers can be small and compact. The external dimensions are approximately the same as those of standard industrial potentiometer enclosures. Central fixing in a single hole and the standard size of shaft have been included. From the variety of resistors on the market we have chosen the most commonly used types and developed a standard program range. The metal Ex d enclosures are tailored to the dimensions of the resistors and feature a standard 30 mm diameter. The potentiometers have been designed so that the stated nominal capacities can be fully exploited at temperature class T6 or T5 and be deployed in zones 1 and 2. In addition to the standard models all other versions such as tandem potentiometers, potentiometers with microswitches, non-standard shafts or larger resistor diameters can be encapsulated in enclosures of up to 120 mm diameter.

The limit value transmitters of Types 07-31...-... are deployed in conjunction with pneumatic actuators on valves and fittings. They serve to signal the "open/closed" status of a fitting. This end position is communicated by means of up to a maximum of 6 limit switches in the "Ex d" type of protection or by means of 6 proximity initiators in conformance to NAMUR in the "Ex i" type of protection. In intrinsically safe proximity initiators there is a choice of slot initiators or V3 initiators. The limit monitors are available in polyester, aluminium and stainless steel. The metal versions can be used in temperatures down to -60 °C – depending on the fitted components. To ensure mechanical adaptability to the pneumatic actuators, we supply 4 consoles according to VDI/VDE 3845. The BARTEC limit monitors can be used in hazardous (potentially explosive) areas in Zone 1 and 2 in accordance with the certified explosion sub-groups IIA, IIB and IIC and the temperature classes T5/T6 and in Zone 21 and 22 in accordance with the certified max. surface temperature.
